

Functional Requirements Document (FRD)

Smart Recruitment - NovaTech Solutions

Prepared for: NovaTech Solutions | **Prepared by:** Carol Felix, Business Analyst

Purpose

This FRD translates the Business Requirement Document (BRD) into system level functional details for Smart Recruitment solution, covering resume screening, interview scheduling, feedback management, SLA tracking, dashboarding, candidate notifications, and system integration.

Functional Requirements

FR ID	Functional Requirement	Traced From
FR -01	System shall parse resume fields (skills, years of experience, education, certifications) upon upload	BR-01
FR-02	System shall calculate a match score (0–100) per candidate by comparing parsed fields against weighted JD criteria configured per requisition.	BR-01
FR-03	The system shall rank candidates in descending order of match score and display the ranked list to the recruiter within 1 business day of resume receipt.	BR-01, BR-02
FR-04	The system shall display a scoring breakdown per candidate (e.g., skills match %, experience match %, JD keyword match %) alongside the overall score.	BR-02
FR-05	The system shall allow the recruiter to manually add any candidate scoring below the shortlist threshold to the active shortlist, with a mandatory comment field for the override reason.	BR-03

FR-06	System shall retrieve real-time calendar availability for the candidate and all assigned panel members via Outlook calendar integration.	BR-04
FR-07	The system shall propose up to 3 conflict-free interview slots based on combined availability.	BR-04
FR-08	System shall auto-book the earliest proposed slot for standard requisitions unless the recruiter pauses the request within a 4-hour window.	BR-05
FR-09	System shall notify the recruiter, candidate, and panel members of the confirmed interview slot via calendar invite and email.	BR-05
FR-10	System shall present a structured feedback scorecard (rating fields + comments) to each panel member immediately after the scheduled interview end time.	BR-06
FR-11	The system shall enforce a 24-hour submission deadline for feedback scorecards.	BR-06
FR-12	The system shall send an automated reminder to panel members at 18 hours if feedback has not been submitted.	BR-07
FR-13	The system shall escalate to the recruiter if feedback remains unsubmitted after the 24-hour deadline.	BR-07
FR-14	System shall allow configuration of SLA thresholds per funnel stage (default: screening <=1 day, scheduling <= 2 days, feedback <= 24 hrs).	BR-08

FR-15	System shall flag a requisition as "at risk" when 75% of the SLA threshold has elapsed without stage completion.	BR-08
FR-16	The system shall trigger an automated alert to the recruiter when a requisition breaches its SLA threshold, and to the Head of TA if breached twice consecutively for the same requisition.	BR-09
FR-17	The system shall display a real-time dashboard showing all active requisitions, current funnel stage, elapsed time per stage, and SLA status (on track/at risk/breached).	BR-10
FR-18	The system shall send an automated status notification to the candidate at each funnel stage transition (applied, under review, interview scheduled, decision pending), without displaying score or ranking detail.	BR-11
FR-19	The system shall integrate with NovaTech's HRIS via API to sync candidate and requisition records, using a defined field-mapping schema to prevent duplicate records.	BR-12
FR-20	The system shall restrict access to candidate PII to authorized recruiter and HR roles only, based on role-based access control (RBAC).	BR-13
FR-21	System shall automatically purge or anonymize candidate PII 12 months after requisition closure, in line with data retention policy.	BR-13

Non-Functional Requirements (NFRs)

NFR ID	Requirement	Category
NFR-01	System shall process and rank a batch of 100+ resumes per requisition within 1 business day without performance degradation.	Performance
NFR-02	The system shall encrypt candidate PII at rest and in transit.	Security/ Data Privacy
NFR-03	System shall maintain an audit log of all access to candidate PII, including user, timestamp, and action.	Security/Compliance
NFR-04	Dashboard shall reflect funnel-stage updates in real time, with a maximum data latency of 5 minutes.	Performance
NFR-05	The system shall be available during business hours (9 AM–7 PM IST) with 99.5% uptime.	Reliability
