

User Stories & Acceptance Criteria

Smart Recruitment — NovaTech Solutions

Epic 1: Automated Resume Screening

US-01: As a Recruiter, I want the system to automatically rank candidate resumes against the JD, so that I don't have to manually review 100+ resumes per requisition.

- Given a requisition with JD criteria configured, when resumes are received, then the system displays a ranked shortlist within 1 business day.
- Given a ranked shortlist, when I view a candidate, then I see their overall match score.

US-02: As a Recruiter, I want to see the scoring breakdown for each candidate, so that I understand why they were ranked the way they were.

- Given a ranked candidate, when I click into their profile, then I see skills match %, experience match %, and JD keyword match % individually.

US-03: As a Recruiter, I want to manually add a below-threshold candidate to the shortlist, so that I can use my judgment on borderline cases.

- Given a candidate below the shortlist threshold, when I choose to override, then the system requires me to enter a reason before saving.
-

Epic 2: Automated Interview Scheduling

US-04: As a Recruiter, I want the system to propose conflict-free interview slots, so that I don't have to manually check calendars across candidates and panels.

- Given a confirmed shortlist, when scheduling is triggered, then the system proposes up to 3 slots based on real-time Outlook availability.

US-05: As a Recruiter, I want standard requisitions to auto-book the earliest slot, so that scheduling doesn't wait on my manual action.

- Given a proposed slot for a standard requisition, when 4 hours pass with no recruiter action, then the system auto-books the slot and sends invites.

US-06: As a Recruiter, I want to pause and reassign a scheduling request, so that I can resolve panel conflicts before a slot is confirmed.

- Given a proposed slot, when I pause the request within the 4-hour window, then the booking is held and I can manually reassign it.

US-07: As a Candidate, I want to receive my interview confirmation by email and calendar invite, so that I know exactly when and where to show up.

- Given a slot is auto-booked or manually confirmed, when confirmation is triggered, then I receive a calendar invite and email notification.
-

Epic 3: Feedback & Candidate Communication

US-08: As a Panel Member, I want a structured feedback scorecard after each interview, so that I can submit consistent, structured input.

- Given an interview has ended, when the scorecard is triggered, then I see rating fields and a comments box with a visible 24-hour countdown.

US-09: As a Panel Member, I want a reminder if I haven't submitted feedback, so that I don't accidentally miss the deadline.

- Given 18 hours have passed with no feedback submitted, when the reminder job runs, then I receive an automated reminder notification.

US-10: As a Recruiter, I want to be alerted if a panel member misses the feedback deadline, so that I can follow up directly.

- Given 24 hours have passed with no feedback submitted, when the deadline is breached, then I receive an escalation alert.

US-11: As a Candidate, I want status updates at each stage of my application, so that I'm not left wondering where I stand.

- Given my application moves to a new funnel stage, when the transition occurs, then I receive a notification showing my current status (not score/ranking detail).
-

Epic 4: SLA Tracking & Funnel Dashboard

US-12: As a Recruiter, I want to see all my active requisitions and their SLA status on one dashboard, so that I can prioritize at-risk ones.

- Given I log into the dashboard, when the page loads, then I see all active requisitions with current stage, elapsed time, and SLA status (on track/at risk/breached).

US-13: As a Recruiter, I want a requisition flagged "at risk" before it breaches SLA, so that I can act proactively instead of reactively.

- Given a requisition reaches 75% of its stage SLA threshold, when the threshold is crossed, then the dashboard flags it "at risk."

US-14: As the Head of Talent Acquisition, I want to be alerted when a requisition breaches SLA twice in a row, so that I can intervene before it escalates further.

- Given a requisition breaches SLA on the same stage twice consecutively, when the second breach is detected, then I receive an automated alert.

Epic 5: System Integration & Data Governance

US-15: As an HRIS/IT Lead, I want the ATS to sync candidate and requisition data with HRIS via API, so that records stay consistent across systems.

- Given a new candidate or requisition record is created in the ATS, when the sync job runs, then the record is reflected in HRIS without duplication.

US-16: As a Compliance Officer, I want candidate PII access restricted by role, so that only authorized users can view sensitive data.

- Given a user without recruiter/HR role attempts to access candidate PII, when the access request is made, then it is denied and logged.

US-17: As a Compliance Officer, I want candidate PII automatically purged after 12 months post-closure, so that we stay compliant with data retention policy.

- Given a requisition has been closed for 12 months, when the retention job runs, then associated candidate PII is purged or anonymized.
